Thanks for choosing to register Eudora!

You'll next be walked through a few quick steps, as described below, before registration is complete:

- Eudora will open your web browser and take you to our registration page
- You'll fill in some simple registration information on the web site
- We'll then email a Eudora registration code back to you
- The next time you check mail, Eudora will automatically recognize this code and display a dialog box inviting you to confirm your registration information
- Ta da! You'll then become a registered user of Eudora... Thanks!

There are updates available to Endora

You have Endora version 4.1. The following updates have become available since this version was released. If you'd like more information any of these updates, simply follow the links. If you'd rather, you of updates, follow this.

Endora 5.0

This is a major upgrade, with great new features like automatic :

Endora 4.2

This update is mostly bug fixes. This update is free to you.

Printed Manual

You can buy a printed manual for Endora.

Fig. 15H

Persistent Ads	
PlayList Request	faceTime Used to determine how much advertising to send to client faceTimeLeft Not used
PlayList Response ClientInfo	reqInterval Relatively large: one or more days flush Used Single playlist completely specifies list of ads client should have
PlayList Response Scheduling Parameters	showForMax Not used

Fig. 16A

Short-Lived Ads	
PlayList Request	faceTime Not used faceTimeLeft Used to determine how many ads client should receive
PlayList Response ClientInfo	reqInterval Not used. Instead client requests new playlist whenever ads "run low" flush: Not used
PlayList Response Scheduling Parameters	showForMax Used to determine how long an ad runs

8 The list of available ads advantageously can be built from the following query:

ads = dbCon.prepareStatement("SELECT * FROM ads WHERE StartDate <= today AND endDate >= today + 30 AND
AdType = 'P' AND AdStatus = 'A' AND ImpressionsServed < Impressions ORDER BY ImpressionsServed ASC);

run out ads = dbCon.prepareStatement("SELECT * FROM ads WHERE StartDate <= today AND endDate >= today +
30 AND AdType = 'R' AND AdStatus = 'A' AND ImpressionsServed < Impressions ORDER BY ImpressionsServed
ASC);

8 The time required to deliver the ads advantageously can be calculated in the following manner.

face time left for today [seconds] = faceTime[today] – faceTimeUsedToday

(Comment: Face time left for today is the number of seconds the servlet can use to deliver special ads today.)

predict face time [seconds] = SUM( faceTime[tomorrow + 1] , ... faceTime[tomorrow + reqInterval]
)

(Comment: Predict face time is the number of seconds the servlet predicts the user is going to have.)

goal show time left [seconds] = predict face time – faceTimeLeft

(Comment: Goal show time left is the number of seconds that the software provider needs to fill with ads.)

```

Fig. 21A

```

* Targeting
while (face time left for today ) {
    if ad is not in the history {
        select ad [according to target = today]
        face time left for today -= ad.showFor
    }
    next ad
}

while (Goal show time left ) {
    if ad is not in the history {
        select ad [according to target]
        goal show time left -= ad.showFor
    }
    next ad
}

```

Default values:

```

reqInterval = 1 day.
faceTime = 30 minutes
faceTimeQuota is ?
histLength = 31 days

```
